

Project Accounting & Performance Auditing Workshop

Fall Workshop presented by WMTA

Tukwila

October 22, 2008

Project Accounting - Have you ever noticed that sometimes engineers and accountants don't speak the same language? Like . . . *When does a project "really" start? What does the term "budget" mean? What is the "Certification Acceptance Program" and why is it important? What is a "Single Audit" and why should you care? When is a project done? Who manages the funding sources? Who keeps the records and which ones? Who is responsible for what?*

This workshop attempts to bring the two groups together. Both sides of the "house" will be represented, so accountants bring your engineers and project managers.

Performance Auditing - Did you know the State Auditor is conducting performance audits on cities? A performance audit is different from a compliance audit. Are you familiar with the difference? Like . . . *What is a performance audit? Why are they being done? What are the different types? How can you prepare for one? What does the term "criteria" mean in a performance audit?*

State Auditors will present the answers to these questions and more.

Please join us for this two-part workshop!

Project Accounting & Performance Auditing Workshop *Registration Information*
